Abstract. Networking is a great way to have a better achievement both in learning and research. With recent technology, networking can become more assessable and achievable through the internet. Here we have summarized our collaborations between PSU and our Indonesia partners both in teaching and research. Teaching has also been transformed greatly during the recent years eg. Collaborative Online International Learning (COIL), which students can learn and share interactively among both parties, another great way of learning. The students can broaden their horizontal and understand the context of cultural diversity, not just only the contents. There are other skills, which can be built up through COIL eg. language, teamwork and time management. International research collaboration is known to be very important and could lead to a greater impact. Here, we summarized some successes between PSU and our Indonesia partners; and how we could drive this collaboration further through 15 centers and 4 platforms with 11 research agendas set. We believe in networking and hope to build up a greater network, which will be greatly benefit for science and society.
